Rationale for goal

The system total is the sum of all institutional goals, which were negotiated with each public university based on institutional capacity and priorities.

About this measure

Kentucky uses two indicators to measure progress in expanding university research. This indicator measures each public university's annual research and development expenditures, which include state, federal, and corporate research dollars and exclude university-funded research. The measure is an important index of Kentucky's intellectual capital and potential for economic growth in a global economy.
